Fire Risk Assessment
Don't get your fingers burnt

Fire Safety Legislation changed on the 1st October 2006 with the introduction of **The Regulatory Reform (Fire Safety) Order 2005**.

Many businesses are still not complying with this new legislation.

Cope Safety Management can help…….

We are offering a complete fire safety package to ensure that you have the tools to comply with the new legislation.

1. A Fire Risk Assessment

We will carry out a one-day* fire risk assessment of your premises and provide the findings and any recommendations in a comprehensive report with full action plan.

* Complex sites may require further time on site. Additional work would be quoted for accordingly.

2. Emergency Action Plan

An emergency action plan will be created. This will include details of nominated responsible persons, information for your employees on evacuation and muster points. A schedule of testing would be prepared to satisfy the regulations.

3. Fire Safety Training

A one-day training session on fire safety tailored to your workplace.

You can choose between 3 sessions of fire safety training or a full one-day training course for your nominated fire marshals.

For further information please contact our offices.
